Project Title

To Supply Leftover Food to the Poor: Food Connect App

1.Project-Overview

This project addresses the challenge of food wastage and hunger by connecting venues with leftover food to designated drop-off points for distribution to the underprivileged. Using the Salesforce platform, the **"Food Connect"** app was developed to streamline the process of collecting, tracking, and delivering food efficiently. This initiative aims to enhance operational efficiency, improve volunteer coordination, and ensure timely food distribution to those in need.

2. Objectives

Business Goals:

- Minimize food wastage by redistributing leftover food.
- Provide timely assistance to the needy by creating a structured workflow.

> Specific Outcomes:

- A user-friendly interface for venues to register and report leftover food.
- A dashboard to track tasks, venue-drop-off point connections, and volunteer contributions.
- Automated task assignments and real-time updates for efficient execution.

•

3. Salesforce Key Features and Concepts Utilized

- > Objects and Relationships: Venue, Drop-Off Points, Volunteers, and Tasks.
- Dashboards: Task Execution Details, Venue-Drop-Off Point Mapping, and Volunteer Performance.
- > Forms: Venue registration and input fields for venue name, email, phone, location, longitude, and latitude.
- > Reports: Detailed tracking of venue-drop-off point connections and volunteer task statistics.
- > Lightning Components: Custom interface design and data visualization.

4. Detailed Steps to Solution Design

➤ Data Model:

- Designed a schema involving relationships between venues, dropoff points, and tasks.
- Integrated fields for location coordinates to ensure accurate mapping and logistics.

➤ User Interface:

- Developed a Lightning dashboard for intuitive navigation.
- Created forms for venue data entry, as shown in the screenshot, to collect critical information.

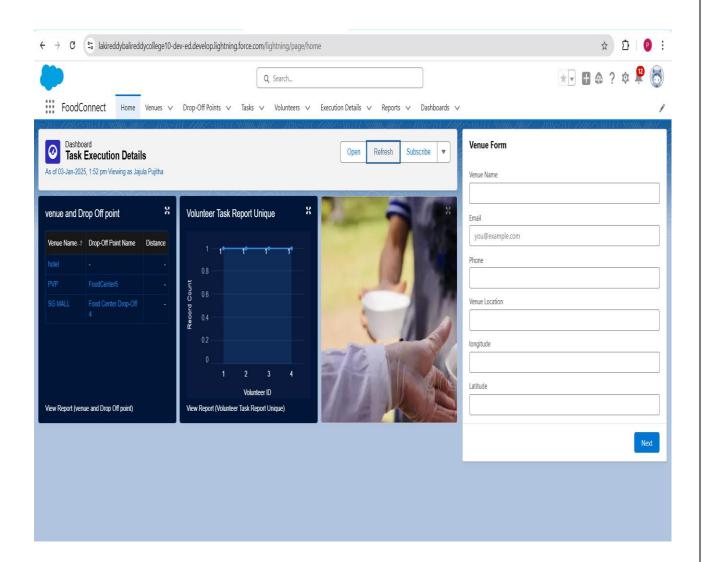

Business Logic:

 Automated task creation and assignment based on venue-drop-off point proximity. • Implemented real-time tracking of volunteer tasks using Salesforce reports and dashboards.

5. Testing and Validation

➤ Unit Testing:

• Apex classes and triggers were tested for data integrity and automation workflows.

➤ User Interface Testing:

- Validated the functionality and responsiveness of forms and dashboards.
- Ensured data accuracy in reports and graphs under various use-case scenarios.

6. Key Scenarios Addressed by Salesforce in the Implementation

- > Venue Management: Efficiently registers and manages venues offering leftover food.
- > **Logistics Coordination**: Maps venues to drop-off points based on proximity and food availability.
- > Volunteer Engagement: Tracks and reports volunteer activities to optimize performance.

7. Conclusion

> Summary of Achievements:

- Successfully developed the Food Connect app to connect food donors with recipients.
- Streamlined food distribution workflows, reducing waste and addressing hunger.
- Improved operational transparency and efficiency using Salesforce dashboards and reports.
